

PROJECT CASE STUDY

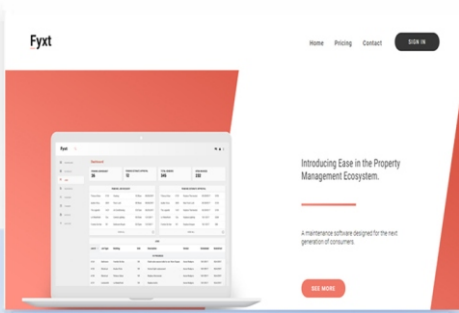

FYXT

Real estate technology meets property management. FYXT is a property management software solution that allows tenants, managers and vendors to communicate, execute and manage property related tasks in one portal. The application allows users to submit maintenance requests, managers to manage and assign such requests to vendors and generate reports associated with the entire process thus streamlining an experience that to date has been archaic.

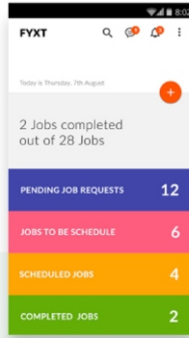

THE BRIEF

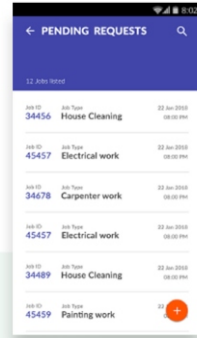

Building blocks is involved in consulting and developing a novel solution to the property management company. Two phased approach was adopted to deliver this application for residential properties in the first phase and for commercial properties in the second phase. This platform spans across the web and mobile delivery channels, connecting the tenants, property managers and vendors seamlessly through a streamlined workflow of service tickets.

The first phase has achieved its milestone with successful implementation of the platform for the residential customers. This is a pioneering solution that is attracting the major players in the real estate industry.

SUMMARY

The first phase has achieved its milestone with successful implementation of the platform for the residential customers. This is a pioneering solution that is attracting the major players in the real estate industry. The potential success of the commercial version has already attracted significant investments from industry behemoths and scheduled to be rolled out in early 2020.
