

THE BRIEF

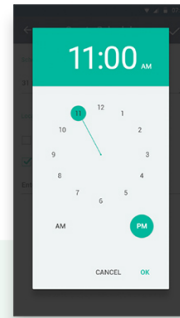

Building Blocks developed an admin panel and a mobile application to offer users and service providers a hassle-free booking, appointment, and rating experience. The client wanted the application to have a sleek user-interface for both the users and the service providers while providing a robust and scalable system for accepting bookings and appointments seamlessly.

Seamless booking and rating experience

Scalable system for accepting bookings and appointments

Clean and user-friendly design

SUMMARY

The FixODO team gave us tight timelines and delivery windows to build a robust application for both iOS and Android. Our teams, within this window, strategized and executed a robust roadmap that was mapped to FixODO's internal business requirements and the customer / vendor feedback that we received. The team took an entirely data driven approach to the initial product development and continues the support the FixODO team with their ongoing product roadmap.
